

extremely silent / extremely compact / extremely efficient / extremely tough

POWER GENERATOR

FOR EXTREME CONDITIONS

Power Generator

Extremely silent. Extremely strong.

SET power generators are true engineering works of art – super silent, extra compact – and, to top it all, provide the highest performance and infinite reliability in all climatic conditions. They are worldwide leaders when challenged with extreme conditions in fields such as the military, show trucks, humanitarian aid or

yacht-building. Its small size and low emissions make additional constructional space or applications possible, whether in outside broadcasting vans, mobile operation theatres or in extreme cases at events such as classic open-air concerts where power supply is indispensable, but should also not be noisy.

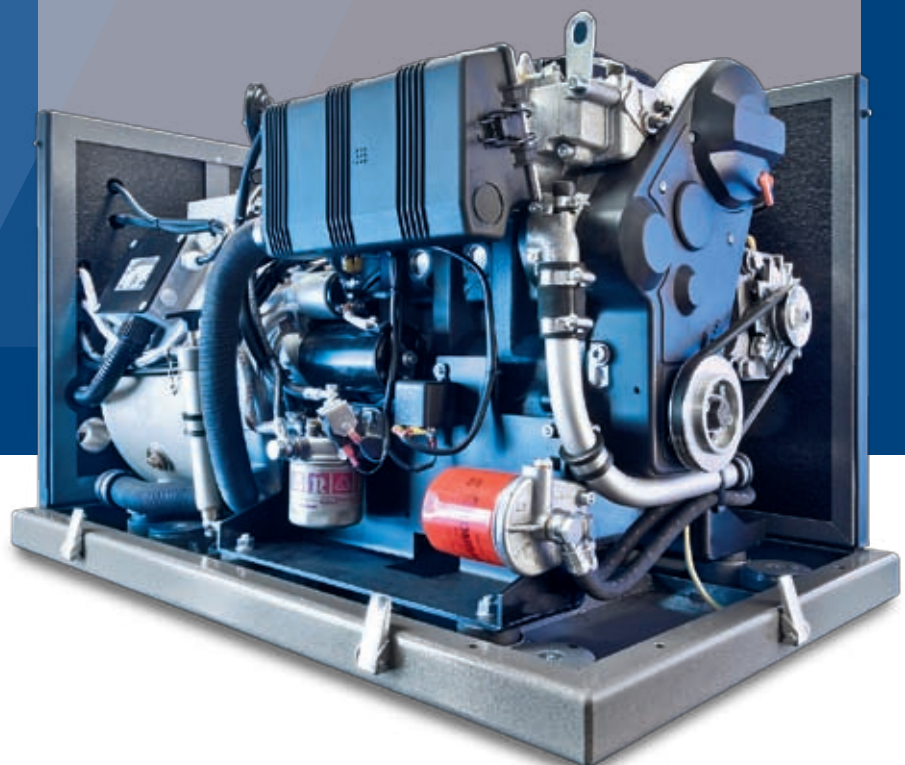

Customer-oriented Technologies

The development of extremely silent, compact and high-performance power generators only bear witness to one of our core competencies. Another strength of SET lies in the individual adaptation of the technologies that we developed. Today, with the most modern engineering tools, we are in a position to take fast, individual and cost-effective advantage of the existing space that your engineers present to us.

- ▀ Vehicle generators
- ▀ Military generators
- ▀ Marine generators
- ▀ stationary power generators
- ▀ mobile power generators
- ▀ power takeoff power plants

Strictest quality criteria

Power generators from SET Stange Energietechnik are optimised to the minutest detail. Essential single components are manufactured and supplied according to our plans and specifications by highly specialised companies in terms of safe and sound partnerships.

All partners are incorporated into our quality management and are subjected to the most stringent quality controls and comprehensive secrecy.

Power Generator

Custom-made for your systems.

Extremely compact for your application.

With worldwide service.

True mobility requires fitting the essentials into the smallest of spaces. There is no place for broad technology and background noises. When and wherever you need unrestricted mobility at the highest performance, our power generators come into the picture, performing their duty silently, inconspicuously and with absolute reliability. And for that, as a rule, it does not even need

40% of the space needed by a conventional power generator in a comparable capacity category. Even in extreme weather conditions our generators produce what is expected of them: it generates power as if it was simply there. And if necessary we provide a 24-hour service worldwide, which dovetails with the objectives of our client.

Power plants in the smallest of spaces

The compact design makes particular sense when the power supply has to be transported by air over several thousand kilometres to remote areas; as is mostly the case with humanitarian aid or for the supply of security forces.

Power Generator

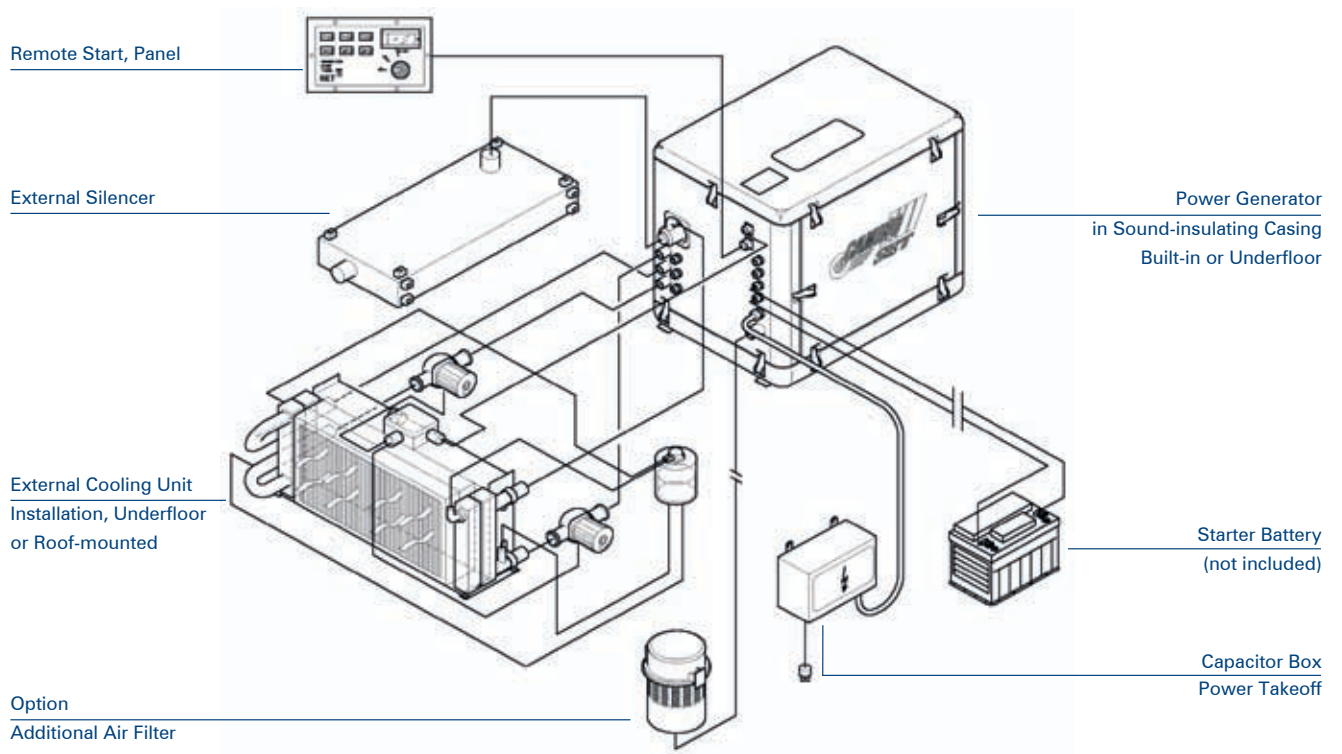

Built for the toughest conditions.

Flying sand, bone-chilling cold or scorching heat, very high humidity or high water levels have no effect on our generators. Years of testing in the toughest conditions led to expertise in our test chambers that meets the highest requirements, as only SET can offer today.

Talk to us about your needs and requirements, about your expectations.

For reasons of secrecy or out of respect for the state of the art engineering achievements of our clients in the development of individual solutions we are not in a position to release any further details. We ask for your understanding.
